

Marquette County's **MEMORY SCREENING:**

Registration
Required

A Closer Look at Memory Changes

A **Memory Screen** is a wellness tool that helps identify possible changes in memory and cognition. It creates a baseline of where a person is at so that future changes can be monitored.

Get immediate results!

Keep them for future comparison, share them with your family and physician. At your request, we will fax them to your physician.

Early detection is important!

Just as blood pressure, cancer, diabetes, or stroke screening contribute to prevention and better treatments, so do **Memory Screens**.

Treatment is possible!

Some types of dementia are reversible, like those caused by nutritional and vitamin deficiencies, depression, thyroid issues, and more.

Knowledge means you have more control!

Dementias that are not reversible can often be treated with medications that can help manage symptoms and preserve quality of life for a longer period of time.

**Memory screens are offered at
ADRC of Marquette County
428 Underwood Ave.
Montello, WI**
